Lesson learnt from integrating Model-Based Testing for production testing for Windows Phone Application
by Chan Chaiyochlarb — Microsoft

Chan Chaiyochlarb has worked in the software testing industry for 12 years. He has been working exclusively in the Quality Assurance field with broad experience software development process, test automations, SBT (Session-Based Testing) and MBT (Model-Based Testing). Since 2009, he has been involved in deploying MBT automation in Windows Phone Test Org at Microsoft Corporation. His interests include improving software quality through innovative methods, "just-enough testing", and increasing testing efficiency.

His previous employment was at Amazon as Quality Assurance Manager responsible for their Affiliate referral program, and online traffic team.
