## Using Model-Based Testing to test Windows Phone Data Sense Case Study

by Kenneth Ma — Microsoft

Kenneth Ma graduated from the University of Toronto in Electrical Engineering with a focus in Communication Systems. He has worked in the software development industry for 9 years including web development, computer aided health imaging, educational products and in internet networking protocols.

Currently, he is working at Microsoft in the Core Networking Team within Windows Phone. He led and derived the test strategy for Data Sense where he adopted Model Based Testing. Within his team, he evangelizes the benefits and helps adoption of Model Based Testing.
