Poster Session

A rational approach to integration testing
by Yves Holvoet — IBM

Yves Holvoet is a Rational Information Technology specialist working in collaborative lifecycle management and more particularly in the area of testing include fonctional, performance and more recently mobile testing. Previously, Yves was involved in configuration management and software architecture and was, in this area, one of the developers of the product Rational Rose and was part of some task forces defining UML 1.0. Yves has been in the IT industry since 1982, initially doing research on formal methods and with Rational since 1989. He is also helping IBM business parters on technical matters and on getting them certified. Yves live in Montpellier and can usually be found sailing in the week-end the South Coast of France.
