New modelling approach to construct Test model for railway embedded systems

by Amine Mechraoui — Alstom Transport

Amine MECHRAOUI is a computer consultant at Alstom Transport Company where he is working on the MBAT project. He has received a PhD degree in Automatic Control from Grenoble Institute of Technology where he was a research assistant in the Automatic Control department of Gipsa Research Laboratory, France. He subsequently spent one year at the University of Grenoble as a research and teaching assistant and then worked as a consultant at ICE group. His research has focused on Network Controlled Systems and recently on Model-based analysis and testing.
