System Validation Process for Instrument Clusters

by Olivier Bodereau — Magneti Marelli

Olivier Bodereau is System Validation Referent in Magneti Marelli (Automotive).

He has a background in electronics and computer science and became a specialist in the area of testing.

In the early 2000s, he has defined a System Validation Process for Instrument clusters using Model-Based Testing approach, with the objective of building a complete tool chain.

At this time he was involved in a European development project of a modeling tool called MaTeLo.

Today, its team manage Automatic Validation of all Instrument clusters developed by the company, for French, German, or Italian vehicles.
