ETSI's event for Industry Test Automation announced

From users to users in the ICT world

Sophia Antipolis, 11 June, 2014: This year, the international ETSI User Conference on Advanced Automated Testing (UCAAT) will be held in Munich between September 16 and 18. Dedicated to advanced test automation, the upcoming conference will cover a variety of activity sectors. Jointly organized by ETSI Technical Committee "Methods for Testing and Specification" (TC MTS) and QualityMinds, a software testing company, the conference will introduce the latest innovations made in test automation. These will cover cloud and model-based testing, testing languages and methodology, web services, as well as automotive, medical, security and safety or cyber-physical systems.

"*There are numerous academic conferences and workshops on automated testing but test experts are in need of an event dedicated to addressing engineering and application aspects of test methodologies, and advanced test automation. UCAAT fills this gap*" says Program Chair, Andrej Pietschker.

Tutorials and business cases showing large scale applications and innovative approaches make it a fruitful and highly practical experience for all attendees.
This year's event will feature a special session on Standardization in Testing, an open interactive session hosted by ETSI Technical Committee "Methods for Testing and Specification" (TC MTS) on the first day of the conference. Industrial users as well as academic and standardization experts will be able to share their experiences and expectations on the need and role of standardization in testing.

Whether you are a test designer, an engineer working in test specification and automation, a beginner or a testing expert, a quality and/or project manager, come to UCAAT to share knowledge and best practices in the industrial use of test automation!
To register, go to http://ucaat.etsi.org/2014

About ETSI
ETSI produces globally-applicable standards for Information and Communications Technologies (ICT), including fixed, mobile, radio, converged, aeronautical, broadcast and internet technologies and is officially recognized by the European Union as a European Standards Organization. ETSI is an independent, not-for-profit association whose more than 700 member companies and organizations, drawn from 63 countries across five continents worldwide, determine its work programme and participate directly in its work.

About QualityMinds

"Quality is not a coincidence" – true to this motto, QualityMinds advise their clients on various topics, including test management, test automation and model-based testing. The combination of methodological knowledge and experience is the key to the company's success in software

development projects. Their main focus lies in agile, offshore and mobile testing, management of test surroundings, as well as testing in large-scale projects. QualityMinds delivers expert test assessment combined with consulting services on subjects such as: requirements engineering, software architecture and roll-out management.
